## **OSTEOPATHY AND PEDIATRICS**

**Osteopathic support from the embryo to the newborn**

**Genevieve Kermorgant D.O.**

**MIH IOS 18-20th September 2022**

I am offering a 3-day course on the osteopathic support of the new-born and on the support from the intrauterine life to the first few years of the little child. Firstly, the development of their emotional world during pregnancy will be presented, with their neurosensory development. Then, we will address the physiology of the birth and its influence on the newborn, as well as the different dysfunctions often seen in clinic. We will also talk about the sensorimotor stages of development according to the psychoanalytical work, which is therapeutically key to adapt our osteopathic follow-up depending on the age and the story of our very young patients.
